DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4, 8-11, 15-21, 23, 27-29, 33, 35, and 36, drawn to nucleic acids that confer ozone-inducible gene expression in a transgenic plant, transgenic plants, and methods of making transgenic plants, classified in class 536, subclass 24.1, for example.
 - II. Claims 5-7, 12-14, 22, 24-26, 30-32, and 37, drawn to drawn to nucleic acids that confer pathogen-inducible (but not ozone inducible) gene expression in a transgenic plant, transgenic plants and methods for making transgenic plants, classified in class 536, subclass 24.1.
 - III. Claim 34, drawn to hybridization methods for detecting ozone-responsive sequences, classified in class 435, subclass 6.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to nucleic acids, plants, and methods of making plants that are distinct from one another in structure and function. The nucleic acids of group I have the property of regulating ozone-inducible gene expression, while the nucleic acids of group II have the property of being ozone-inducible but not pathogen inducible. Each nucleic acid has a distinct sequence and function in biological systems.

Art Unit: 1655

3. Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the nucleic acids of invention I can be used in other methods such as for the transformation of plants to produce plants which comprise an ozone-inducible transgene.

4. Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the particular products and methods of invention II are not disclosed for use with the methods of invention III.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as demonstrated by their different classification and recognized divergent subject matter and because inventions I-III require different searches that are not coextensive, examination of these claims would pose a serious burden on the examiner and therefore restriction for examination purposes as indicated is proper.

6. A telephone call was made to John Gresens on 8/1/01 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1655

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Juliet C. Einsmann whose telephone number is (703) 306-5824. The examiner can normally be reached on Monday through Thursday, 7:00 AM to 4:30 PM.
